Average Monthly Usage: 1,160 kWh

Average Monthly Demand: 5.7 kW

Rates as of March 1, 2024.

\* This comparison illustrates the estimated electricity costs for a typical commercial TOU-A commercial customer within the Clean Energy Alliance with an average monthly consumption of 1,160 kilowatt-hours (kWh). This is based on 12-months of billing history for all customers on a TOU-A rate plan and published rates as of March 1, 2024.

**Generation Rate** is the cost of generating and/or purchasing electricity to power your home or business. The generation rate varies based on your energy provider and the resources included in your energy provider's generation power source.

**SDG&E Delivery Rate** is SDG&E's charge to deliver electricity to your home or business. The electric delivery rate may vary depending on your rate and electricity use; however, it is charged equally to customers regardless of who provides your electric generation.

**SDG&E PCIA & FF** represents the **Power Charge Indifference Adjustment (PCIA)** and **Franchise Fee Equivalent Surcharge (FF)**. The PCIA is a charge to ensure that both SDG&E customers and those who have left SDG&E service to purchase electricity from other providers pay for the above market costs for electric generation resources that were procured by SDG&E on their behalf. "Above market" refers to expenditures for generation resources that cannot be fully recovered through sales of these resources at current market prices. The FF is a surcharge applied to electricity transported over SDG&E systems that are constructed in public streets and highways. SDG&E collects the surcharge from customers and remits them to the appropriate municipality. This surcharge is charged equally to customers regardless of who provides your electric generation. The PCIA and the SDG&E commodity portion of the FF are included within the generation rate of SDG&E's standard bundled service on a customer's bill.

\* SDG&E and CEA data reported to the California Energy Commission's 2022 Power Source Disclosure Program.

\*\* Unspecified sources of power refers to electricity that is not traceable to a specific generating facility, such as electricity traded through open market transactions. Unspecified sources of power are typically a mix of all resource types, and may include renewable.
